

Vibrating Tables

With and without stepless frequency regulation in the range of 0 – 100 Hz – via frequency converter

Our vibrating tables are designed specially for your application.

Whether for compacting, testing, levelling or loosening, the vibrating tables are adjusted to their application in amplitude, rotational speed, as well as their entire vibration behaviour.

- adjustable in height.
- simple mounting mechanism
- no need for fixing the tables on the floor
- only slight transmission of impact sound
- available with permanent magnets
- control of two vibrators, rotating in opposite directions, with the help of an electronic frequency converter
