

## Vibrating Beams

### For Tunnel and Bridge Constructions / Industry and Precast Applications

The vibrating beams are designed and produced:

Specially for your application.

The vibrating beams can be adjusted in height and centre line.

They are driven manually via a drive with hand switch. An electric drive is available if requested.

If they are equipped with special Mooser-pneumatic attachment vibrators the compaction depth, using F4 concrete, is up to 25cm.
